                                                                                                                 New immunoglobulin molecules are described that bind kinase insert domain-containing receptor (KDR) with a comparable affinity to human vascular endothelial growth factor (VEGF). The antibodies neutralise KDR activation. The immunoglobulin may be a multivalent single chain antibody, a monovalent single chain antibody, a diabody, a chimarised antibody, a diabody, a triabody, a humanised antibody or a chimarised antibody.

The immunoglobulin molecules bind specifically to an extracellular domain of the KDR receptor with the same affinity as VEGF. Overexpression of VEGF has been implicated in a number of human tumour cell lines including glioblastoma multiforme, chemangloblastoma, central nervous system neoplasms and AIDS associated Karposi's sarcoma. The antibodies therefore have capplications in treating these conditions. This sequence encodes a furnamental party of the complementary determining region of the

The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial growth factor receptor (VEGFR) in mammals particularly humans. The method involves treating the mammals with humanised vEGFR monoclonal antibodies (antagonists) Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to nono Hodgkin's and Hodgkin's disease. The present sequence is humanised antibody murine heavy chain hypervariable region (VH) CDR-3 used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The present sequence is that of complementarity determining region 3 of the heavy chain variable region (see also AAB82701) of IMC-1C11, a mouse-human chimeric antibody that has vascular endothelial growth factor (VEGF) antagonist activity. The antibody, or a fragment of it, can be used as an anti-angiogenic molecule, corpether with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent. The anti-angiogenic molecule inhibits or blocks the action of a vascular endothelium survival factor such as VEGF or its receptor, and is especially IMC-1C11. Conditions that can be treated include a neoplasm, a collagen-vascular disease or an autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Complementarity determining region; CDR; CDRH3; antigen; cytostatic; angiogenesis inhibitor; vascular endothelial growth factor receptor; VEGF; tumour; leukaemia; antibody; cell proliferation inhibitor; antibody heavy chain variable domain.

```
cantigen-binding site located to the N terminus of immunoglobulin (Ig)

light chain constant domain (CL domain), and P2 has an antigen-binding

site located to the N terminus of the CH1 domain. (I) is useful for:

can contralising the activation of a vascular endothelial growth factor

(VEGF) receptor; reducing tumour growth; inhibiting angiogenesis;

cc reducing endothelial cell proliferation; inhibiting VEGF induced

migration of human leukaemia cells; blocking interaction of a protein and

its ligand; promoting interactions between immune calls and target cells;

cand in vivo and in vitro for investigative, diagnostic or treatment

cmethods. The design of (I) provides for efficient production so that

cand in vivo and in vitro for investigative, diagnostic or treatment

combistantially all of the antigen-binding proteins produced are assembled

in the desired configuration. (I) is bivalent and bispecific, homogeneous

and in tetrament for mr. The heavy chain constant domains which constitute

the Fc region (e.g., CH2 and CH3 for an IgG molecule) of a natural

cantibody and which provide other antibody functions can be present. There

considerative sequence represents the heavy chain variable domain

complementarity determining region (H3 (CDRH3) incorporated into an

complementarity determining region in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel immunoglobulin molecules binding kinase insert domain-containing receptor with the same affinity as vascular endothelial growth factor,

Claim 4; Page 50-51; 55pp; English.

New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides

WPI; 2002-106189/14.

N-PSDB; AAS20279.

Claim 55; Page 56; 64pp; English.

The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. P1 has an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial growth factor receptor (VEGFR) in mammals particularly humans. The method involves treating the mammals with humanised VEGFR monoclonal antibodies (antagonists).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Vascular endothelial growth factor receptor; VEGFR; antagonist; tumour; cytostatic; heavy chain; myelocytic leukaemia; lymphocytic; erythrocytic; multiple myeloma; lymphoid cell; Hodgkin's disease; mouse; human; chimeric.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Inhibiting growth of non-solid tumor cells useful to treat bone marrow tumors souch as leukemias or multiple myeloma comprises treatment with an antagonist of a vascular endothelial growth factor receptor -
                   New immunoglobulin molecules are described that bind kinase insert domain-confaining receptor (KDR) with a comparable affinity to human vascular endchelial growth factor (VEGF). The antibodies neutralise KDR activation. The immunoglobulin may be a multivalent single
                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                      as
                                                                                                                                                                                                                                               ø
                                                                                      triabody, a humanised antibody or a chimerised antibody, a diabody, a monovalent single chain antibody, a diabody, a monovalent single chain antibody, a diabody, a humanised antibody or a chimerised antibody, a humanised antibody or a chimerised antibody, a cartacellular domain of the KDR receptor with the same affinity and VEGF. Overgexpression of VEGF has been implicated in a number of human tumour cell lines including glioblastoma multiforme, hemangioblastoma, central nervous system neoplasms and AIDS associated Karposi's sarcoma. The antibodies therefore have applications in treating these conditions. This sequence encodes preferred these variance concodes and the complementary determining region of the
                                                                                                                                                                                                                                                                                                                                                                                            ó

mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is humanised antibody heavy chain frgament used in the exemplification of the

                                                                                                                                                                                 The present sequence is that of the heavy chain variable region of inc-1c11, a mouse-human chimeric antibody that has vascular endothelial growth factor (VEGF) antagonist activity. The antibody, or a fragment of it, can be used as a nati-angiogenic molecule, cogether with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an ini-angiogenic molecule and a chemotherapeutic agent, to produce a regression or arrest of the condition while minimalsing or preventing significant toxicity of the chemotherapeutic agent.

The anti-angiogenic molecule inhibits or blocks the action of a vascular endothelium survival factor such as VEGF or its receptor, and is especially INC-1C11. Conditions that can be treated include a neoplasm, a collagen-vascular disease or an autoimmune disease, carcinoma, prostate carcinoma, colon carcinoma, lung carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, cultiforme or melanoma (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes an antigen-binding protein (I) comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antigen-binding protein; antibody heavy chain variable domain; cytostatic; angiogenesis inhibitor; tumour; leukaemia; antibody; vascular endothelial growth factor receptor; VBGF;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

                                                                                                                                                    migration of human leukaemia cells; blocking interaction of a protein and its ligand; promoting interactions between immune cells and target cells; and in vivo and in vitoo for investigative, diagnostic or treatment methods. The design of (I) provides for efficient production so that substantially all of the antigen-binding proteins produced are assembled in the designed configuration. (I) is bivatent and bispecific, homogeneous and in tetrameric form. The heavy chain constant domains which constitute the Fc region (e.g., CH2 and CH3 for an IgG molecule) of a natural antibody and which provide other antibody functions can be present. There is no requirement for processing in vitro to obtain the complete product. This sequence represents a heavy chain variable domain (VH) incorporated into Fv, an engineezed protein containing a heavy chain variable domain and a light chain variable domain in one polypeptide chain, described in the method of the invention.
complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. P1 has an antigen-binding site located to the N terminus of immunoglobulin (Ig) light chain constant domain (CL domain), and P2 has an antigen-binding site located to the N terminus of the CH1 domain. (I) is useful for: neutralising the activation of a vascular endothelial growth factor (VEGF) receptor; reducing tumour growth; inhibiting angiogenesis; reducing endothelial cell proliferation; inhibiting VEGF induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cytostatic; angiogenesis inhibitor; tumour; leukaemia; antibody; vascular endothelial growth factor receptor; VEGF; cell proliferation inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antigen-binding protein; antibody heavy chain variable domain;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
```

The invention describes an antigen-binding protein (I) comprising

us-09-865-198-3.rag

```
complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. Pl has an antiably associated in an immunoglobulin like complex. Pl has an entiably associated to the N terminus of immunoglobulin (Ig) [19] thain constant domain (CL domain), and P2 has an antigen-binding site located to the N terminus of the CH1 domain. (I) is useful for: neutralising the activation of a vascular endothelial growth factor (VEGF) receptor; reducing tumour growth; inhibiting angiogenesis; reducing endothelial cell proliferation; inhibiting vEGF induced [CC] migration of human leukaemia cells; blocking interaction of a protein and its ligand; promoting interactions between immune cells and target cells; and in vivo and in vitro for investigative, diagnostic or treatment can in vivo and in vitro for investigative, diagnostic or treatment complementally all of the antigen-binding proteins produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous custom in tetrameric form. The heavy chain constant domains which constitute antibody and which provide other antibody functions can be present. There is no requirement for processing in vitro to obtain the complete product. This sequence represents a heavy chain variable domain (VH) incorporated into the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vascular endothelial growth factor receptor; VEGFR; antagonist; tumour; cytostatic; heavy chain; myelocytic leukaemia; lymphocytic; erythrocytic; monocytic; multiple myeloma; lymphoid cell; Hodgkin's disease; chimeric;

The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial crown receptor (VEGFR) in mammals particularly humans. The method involves treating the mammals with humanised VEGFR monoclonal antibodies involves treating the mammals with humanised vEGFR monoclonal antibodies cartable region folmed to human constant region, where the humanised mouse complementarity determining region core variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, cor chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, con-Hodgkin's and Hodgkin's disease. The present sequence is chimeric picli heavy chain fragment which is used for the construction of chimeric picli igg expression vector. Chimeric picli heavy chain contains cloned decreated the contains cloned decreated the contains contains cloned decreated the contains cloned decreated the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of the heavy chain variable region of IMC-ICI1, a mouse-human chimeric antibody that has vascular endothelial growth factor (VEGF) antaqonist activity. The antibody, or a fragment of it, can be used as an anti-angiogenic molecule, together with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce a cepression or arrest of the condition while minimising or preventing significant toxicity of the chemotherapeutic agent. The anti-angiogenic molecule inhibits or blocks the action of a vascular endothellum survival factor such as VEGF or its receptor, and is sepecially IMC-ICI1. Conditions that can be treated include a neoplasm, a collaquer-vascular disease or an autoimmune disease, especially a solid tumour, including breast carcinoma, lung carcinoma, prostate carcinoma, prostate carcinoma, prostate carcinoma, collagent controllage and the conditions of prostate carcinoma, prostate carcinoma, collagent controllage carcinoma, prostate carcinoma, collagent controllagent controllagent carcinoma, prostate carcinoma, collagent controllagent carcinoma, prostate carcinoma, collagent controllagent carcinoma, prostate carcinoma, collagent carcinoma, collagent carcinoma, prostate carcinoma, collagent carcinoma, collagen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antigen-binding protein, single chain variable fragment version #2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ovarian carcinoma, neuroblastoma, central nervous system tumour, neuroblastoma, glioblastoma multiforme or melanoma (all claimed)

```
The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. Pl has an antigen-binding site located to the N terminus of immunoglobulin (Ig) light chain constant domain (CL domain), and P2 has an antigen-binding site located to the N terminus of the CHI domain. (I) is useful for: neutralising the activation of a vascular endothelial growth factor (VEGF) receptor; reducing tumour growth; inhibiting angiogenesis; ceducing endothelial cell profileration; inhibiting useful indication of human leukaemia cells; blocking interaction of a protein and its ligand; promoting interactions between immune cells and target cells; and in vivo and in viro for investigative, diagnostic or treatment methods. The design of (I) provides for efficient production so that substantially all of the antigen-binding proteins produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous and in tetrameric form. The heavy chain constant domains which constitute the Fc region (e.g., CH2 and CH3 for an IgG molecule) of a natural cantibody and which provide other antibody functions can be present. There
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            is no requirement for processing in vitro to obtain the complete product. This is the amino acid sequence of a single chain variable fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New bispecific immunoglobulin-like antigen-binding protein for reducing tunnour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides  . \\
      Antigen-binding protein; single chain variable fragment; svFv; antigen; cytostatic; angiogenesis inhibitor; tumour; leukaemia; antibody; vascular endothelial growth factor receptor; VEGF; cell proliferation inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (scFv), an engineered protein containing a variable light and variable heavy domain on one polypeptide, described in the method of the

                                                                                                                                                                                                                                                                   88888888888
                                                                                                                                                                              ò
                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (VEGF) receptor; reducing tumour growth; inhibiting anglogenesis; reducing endothelial cell proliferation; inhibiting VEGF induced migration of human leukaemia cells; blocking interaction of a protein and its ligand; promoting interactions between immune cells and target cells; and in vitro for investigative, diagnostic or treatment methods; The design of (1) provides for efficient production so that substantially all of the antigen-binding proteins produced are assembled
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. P1 has an antigen-binding site located to the N terminus of immunoglobulin (Ig) light chain constant domain (CL domain), and P2 has an antigen-binding site located to the N terminus of the CH1 domain. (I) is useful for: neutralising the activation of a vascular endothelial growth factor
                                                                                                                                                                    Antigen-binding protein; single chain variable fragment; scFv; antigen; cytostatig; angiogenesis inhibitor; tumour; leukaemia; antibody; vascular endothelial growth factor receptor; VEGF; cell proliferation inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New bispecific immunoglobulin-like antigen-binding protein for reducing tumour growth and for inhibiting angiogenesis, comprises a complex of two polypeptides and two second polypeptides.
                                                                                                                                                    Antigen-binding protein, single chain variable fragment version #1
                                                                                                                                                                                                                                                                                                                                                                          133..240

in the desired configuration. (I) is bivalent and bispecific, homogeneous and in tetrameric form. The heavy chain constant domains which constitute the Fc region (e.g., CH2 and CH3 for an IgG molecule) of a natural antibody and which provide other antibody functions can be present. There is no requirement for processing in vitro to obtain the complete product. This is the amino acid sequence of a single chain variable fragment (scFV), an engineered protein containing a variable light and variable heavy domain on one polypeptide, described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           VLA-4; inhibitor; binding peptide; leucocyte adhesion; CD49d/CD29; CDR; alpha4betal integrin; VCAM-1; endothelial cell; antibody; meningitis; complementarity determining region; inflammatory brain disorder; therapy; multiple sclerosis; encephalitis; Alzheimmer's disease; atherosclerosis; ALDS dementia; diabetes; inflammatory bowel disease; tumour metaetases; rheumatoid arthritis; transplant rejection; myocardial ischaemia; asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAR92563-R92594 represents VLA-4 binding peptides derived from the FGN region of VCAM-1. VLA-4 is also known as alpha4betal integrin and CD494CVCD3. VLA-4 binds to the non-matrix molecule VCAM-1, which is expressed by endothelial and other cells. These sequences mimic a short consensus sequence in the FGN region of VCAM-1. These sequences inhibit the adhesion of leucocytes mediated by VLA-4. It is useful for treating inflammatory brain disorders (especially multiple sclerosis), meningitis, encephalitis, asthma, Alzheimer's disease, atherosclerosis, AIDS dementia, diabetes, inflammatory bowel disease, rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           peptide(s) that bind VLA-4, inhibit leucocyte adhesion - usefu. for treatment of inflammatory disease, e.g. multiple sclerosis

ő
arthritis, transplant rejection, tumour metastases and myocardial ischaemia. These sequences can also be labelled, and can then be used for in vivo or in vitro diagnosis, such as monitoring inflammatory responses, isolating leucocytes, in assays for inhibitors of VLA-4/VCAM-1 interactions and imaging sites of inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This amino acid sequence codes for the N-terminal end of the control fusion protein. It was obtd. from the DNA and makes up the putative binding domain of the control fusion protein. The fusion proteins, termed Totally Synthetic Affinity Reagents (TSARS) are useful for in vitro and in vivo applications that make use of binding regions of antibodies. DNA binding proteins, adhesive proteins, etc. e.g. in the field of biomedicine, bioregulation and control. Also in the prodn. of vaccines, (immunogens) in separations and purifications, and in diagnostics. The method is quick, simple, efficient and relatively inexpensive. A great diversity of binding characteristics can be obtd. There is no need for detailed knowledge of the function of portions of the binding sequence or the amino acids that are involved in ligand binding in order to produce the TSARS. See also AAR13722.
                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Prodn. of hetero-functional binding fusion proteins - used for in vitro and in vivo applications, e.g. diagnosis and vaccine prodn.

Sequence 61, Application US/07857224B

Patent No. 5958784

GENERAL INFORMATION:
TITLE OF INVENTION: Predicting Folded Structures of Proteins
TITLE OF INVENTION: Predicting Folded Structures of Proteins
NUMBER OF ENQUENCES: 114

CORRESPONDENCE ADDRESS:
STREET: Hadlaubstrasse 151

CITY: Larich
STRIET: none
COUNTRY: Switzerland
IP: (note: this is an international post code) CH-8092

COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5 inch diskette, 1.4 Mb storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 261;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 42, Application US/08467580B
Fatent No. 6001809
GENERAL INFORMATION:
APPLICANT: Thorsett, Eugene D
APPLICANT: Yednock, Theodore A
TITLE OF INVENTION: Inhibitors of Leukocyte Adhesion
FILE REFERENCE: 123-US-CIPI
CURRENT APPLICATION NUMBER: US/08/467,580B
CURRENT FILING DATE: 1995-06-06
EARLIER APPLICATION NUMBER: 08/273,055

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3350, Application US/09134001C

Patent No. 6380370

GENERAL INCORDATION:

APPLICANT: Lynn Doucette-Stamm et al
APPLICANT: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: DEPLOEMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPRÉMENC: GT-C07

CURRENT FILING DATE: 1998-08-13

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-10-14

RIOR FILING DATE: 1997-10-14

RIOR FILING DATE: 1997-10-14

SEQ ID NO 3330

LENGTH: 660

Patent No. US20020064528A1

GENERAL INFORMATION:

APPLICANT: Zhu, Zhenping

APPLICANT: Witte, Larry

TUTLE OF INVENTION: Antibodies Specific to KDR and Uses Thereof

FILE REFERENCE: 11245,46505

CURRENT APPLICATION NUMBER: US/09/976,787

CURRENT FILING DATE: 2001-10-12

PRIOR APPLICATION NUMBER: US 60/493,539

PRIOR PLING DATE: 1999-01-28

PRIOR PLING DATE: 1999-01-29

NUMBER OF SED ID NOS: 40

SOFTWARE: WordPerfect 8:0 for Windows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ó:

Sequence 22, Application US/09865198
Patent No. US20020103345al
GENERAL INFORMATION:
APPLICANT: Zhu, Zhenping
TITLE OF INVENTION: Bispecific Immunoglobulin-Like Antigen Binding Proteins and Me:
TITLE OF INVENTION: Production
TITLE OF INVENTION: Production
CURRENT APPLICATION NUMBER: US/09/865,198
CURRENT FILING DATE: 2001-05-24
PRIOR APPLICATION NUMBER: US 60/206,749
PRIOR FILING DATE: 2000-05-24
NUMBER OF SEQ ID NOS: 34
NUMBER OF SEQ ID NOS: 34
NUMBER OF SEQ ID NOS: 34

N.Alternate names: methionyl-tRNA synthetase
C; Species: Thermus aquaticus
C; Date: 30-Uun_1992 #sequence_revision 30-Jun-1992 #text_change 03-Jun-2002
C; Accession: A_0517
R; Nureakl, O.; Muramatsu, T.; Suzuki, K.; Kohda, D.; Matsuzawa, H.; Ohta, T.; Miyazawa, J. Biol. Cham 266, 3268-3277, 1991
A; Title: Methionyl-tRNA synthetase gene from an extreme thermophile, Thermus thermophilu esis.
A; Reference number: A39517; MUD:91131636; PMID:1993699
A; Accession: A_39517
A; Molecule type: DNA
A; Residues: 1,506 Auny
A; Residues: Methionine-tRNA ligase
C; Reywords: aminoacyl-tRNA synthetase; ATP; homodimer; ligase; protein biosynthesis

"Purification and properties of gamma-glutamyltranspeptidase from Parification and properties of gamma-glutamyltranspeptidase from Bacillus subtilis (natto).";

Agric. Biol. Chem. 55:2971-2977(1991).

-!- CATALYTIC ACTIVITY: (5-L-glutamyl)-peptide + an amino acid = peptide + 5-L-glutamyl-amino acid.

-!- ENZYME REGULATION: INHIBITED BY GLUGOSE.

-!- PATHWAY: GGT PLAYS A KEY ROLE IN THE GAMMA-GLUTAMYL CYCLE, A PATHWAY FOR THE SYNTHESIS AND DEGRADATION OF GLUTATHIONE.

-!- SUBUNIT: THIS ENXYME CONSISTS OF TWO POLYPEPTIDE CHAINS, WHICH ARE SYNTHESIZED IN PRECURSOR FORM FROM A SINGLE POLYPEPTIDE (BY

```
The sequences AAY28390 to AAY28392 replace the CDR regions of the NEWN DNA and they produce AAY28394, the hKM796L human anti-GM2 antibody light
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Chimeric human antibodies of the invention are useful in the treatment of cancer, especially that which is of neural ectodermal origin. In contrast to prior art constructs based on mouse monoclonal antibodies, the chimeric human antibodies do not cause anti-mouse immunoglobulin production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The chimeric human antibodies have a prolonged half-life and a reduced frequency of adverse effects when compared to mouse monoclonal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a complementarity determining region (CDR) from the heavy chain of the antibody of the invention. The antibody of the invention is a human CDR transplanted antibody that reacts specifically with ganglioside GM2. DNA encoding the antibody, and vectors and transformants containing it, can be used for the recombinant production of the antibody. The antibody isself can be used as an anti-tumour agent or as a diagnostic tool for related cancers. The antibody has antitumour agent activity against ganglioside GM2 positive cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ganglioside GM2; antibody; complementarity determining region; cancer;
                                                                                                                                                                                                                                                                                                                           Gaps
                                                                        The present sequence is complementarity determining region 1 (CDR1) from the light chain variable region of the murine anti-human interleukin 5 receptor alpha chain (hIL-5R alpha) monoclonal antibody (MAD) RM1486. RM1486 is produced by the hybridoma FERM BP-5651, which was prepared by immunising Balb/c mice with hIL-5R alpha, fusing spleen cells obtained from the mice with mouse myeloma Pg-41 cells and screening the resultant hybridomas. The MAD can be used to detect or assay for hIL-5R alpha and cells expressing it on their surface, especially to disgnose allergic respiratory diseases, e.g. chronic bronchitis. It can also be used to treat such also be used.
   diagnosis and treatment of respiratory allergic diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A humañ type complementarity determining region transplanted antibody against ganglioside GM2 - useful as an anti-tumour agent and as a diagnostic for related cancers
                                                                                                                                                                                                                                                                                                                        ;

The invention relates to a gene recombinant antibody that has specific reaction with human vascular endothelial growth factor (VEGF) receptor Flt-1. The antibodies are useful for diagnosis and as remedies for diseases due to abnormal neovascularisation such as proliferation or metastasis of solid tumor, arthritis in rheumatoid arthritis, diabetic retinopathy, premature retinopathy and psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                               Gene recombinant antibodies, useful for diagnosis and as remedies for diseases due to abnormal neovascularization e.g. proliferation or metastasis of solid tumor, rheumatoid arthritis, diabetic retinopathy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antibody; human; vascular endothelial growth factor; VEGF receptor; Flt-1; neovascularisation; cell proliferation; metastasis; tumour; rheumatoid arthritis; retinopathy; psoriasis.
Antibody; human; vascular endothelial growth factor; VEGF receptor; Flt-1; neovascularisation; cell proliferation; metastasis; tumour; rheumatoid arthritis; retinopathy; psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Anti-human VEGF receptor Flt-1 antibody CDR peptide sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New immunoglobulin molecules are described that bind kinase insert domain-containing receptor (KDR) with a comparable affinity to human vascular endothelial growth factor (VEGF). The antibodies neutralise CKDR activation. The immunoglobulin may be a multivalent single chain antibody, a humanised antibody a chimarised antibody, a diabody, a climarised antibody. The immunoglobulin molecules bind specifically to an extracellular domain of the KDR receptor with the same affinity as CKF. Overexpression of VEGF has been implicated in a number of human tumour cell lines including glioblastoma multiforme, hemangioblastoma, central nervous system neoplasms and ALDS associated Karposi's sarcoma. The antibodies therefore have applications in treating these conditions. This sequence encodes a preferred heavy chain complementary determining region of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel immunoglobulin molecules binding kinase insert domain-containing receptor with the same affinity as vascular endothelial growth factor, used to reduce tumour growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial growth factor receptor (VECFR) in mammals particularly humans. The method involves treating the mammals with humanised VECFR monoclonal antibodies (antagonists). Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse warlable region contains mouse complementarity determining region
                                                                                                      The invention relates to a gene recombinant antibody that has specific reaction with human vascular endothelial growth factor (VEGF) receptor Flt-1. The antibodies are useful for diagnosis and as remedies for diseases the to abnormal neovascularisation such as proliferation or metastasis of solid tumor, arthritis in rheumatoid arthritis, diabetic retinopathy, premature retinopathy and psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Vascular endothelial growth factor receptor; VEGFR; antagonist; tumour; cytostarl, light chain hypervariable region; VL; myelocytic leukaemia; lymphocytic; erythrocytic; monocytic; multiple myeloma; lymphoid cell; Hodgkin; s disease; complementarity determining region-1; CDR-1; mouse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inhibiting growth of non-solid tumor cells useful to treat bone marrow tumors such as leukemias or multiple myeloma comprises treatment with an antagonist of a vascular endothelial growth factor receptor -
                       Gene recombinant antibodies, useful for diagnosis and as remedies for diseases due to abnormal neovascularization e.g. proliferation or metastasis of solid tumor, rheumatoid arthritis, diabetic retinopathy

(CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic myelocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is humanised antibody murine light chain hypervariable region (VL) CDR-1 used in the exemplification of the invention.

IMC-1C11, a mouse-human chimeric antibody that has vascular endothelial growth factor (VEGF) antagonist activity. The antibody, or a fragment of it, can be used as an anti-angiogenic molecule, together with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ø

                                                                                                                                                                   Gaps
regression or arrest of the condition while minimising or preventing significant toxicity of the chemotherapeutic agent. The anti-angiogenic molecule inhibits or blocks the action of a vascular endothelium survival factor such as VEGF or its receptor, and is especially IMC-1C11. Conditions that can be treated include a neoplasm, a collagen-vascular disease or an autoimmune disease, especially a solid tumour, including breast carcinoma, lung carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, ovarian carcinoma, neuroblastoma, central nervous system tumour, neuroblastoma or melanoma (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to derivatives of an antibody against ganglioside GM2. The antibody may be a monoclonal antibody or its fragments. The antibody is combined with a radioactive isotope, protein or small drug in the treatment and diagnosis of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Monoclonal antibodies against ganglioside GM2 combined with drugs, radioisotopes or proteins for treatment and diagnosis of cancer

RESULT 10

```
monocytes and macrophages from haematopoietic stem cells, containing a substance which binds to human vascular endothelial growth factor (VEGF) ceeptor Flt-1. The invention also includes a method for diagnosing a disease in which the differentiation of monocytes and macrophages is cipplicated, using the reagent, and an agent for the treatment of diseases diagnosed using the method, containing a substance which binds to Flt-1. Or a substance which inhibits the signal transduction of Flt-1. Diseases which inhibits the signal transduction of Flt-1. Diseases which may be diagnosed or treated include inflammation, delayed hypersensitivity, malignant tumours and arteriosclerosis.

CAP70190 - AAF70244, AAF70251 and AAF7028 represent DNA sequences encoding anti-human Flt-1 monoclonal antibody fragments, and antibody is used in the reagent of the invention. FCR primers AAF70455 antibody is used in the reagent of the invention. FCR primers AAF70455 antibody is used in the reagent of the invention of the antibody is used in the reagent of the invention. FCR primers AAF70455 of the anti-human Flt-1 antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 monocrees and macrophages from haematopoietic stem cells, containing a substance which binds to human vascular endothelial growth factor (VEGF) receptor.Fit-1. The invention also includes a method for diagnosing a disease im which the differentiation of monocytes and macrophages is implicated, using the method, containing a substance which binds to Fit-1 or a substance which inhibits the signal transduction of Fit-1. Diseases diagnosed using the method, containing a substance which binds to Fit-1 or a substance which inhibits the signal transduction of Fit-1. Diseases diagnosed or treated include inflammation, delayed hypersensitivity, malignant tumours and arteriosclerosis.

AAF70190. AAF70244, AAF70251 and AAF70258 represent DNA sequences on cligonuclectides used in the construction of the antibody. The monoclonal antibody is used in the reagent of the invention. PCR primers AAF70245 AAF70245 AAF70245 and AAF70246 of the invention of the antibody DNA sequences. Protein sequences AAB78848 - AAB78870 (represent fragments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
              Differentiation, monocyte, macrophage, haematopoietic stem cell; cancer; vascular endothelial growth factor; VEGF; Flt-1; inflammation, antibody; delayed hypersensitivity; malignant tumour; arteriosclerosis.
                                                                                                                                                                                                                                                                                                                                                                              Substances binding to human vascular endothelial growth factor receptor Flt-1, used for diagnosis and treatment of inflammatory diseases, arteriosclerosis, cancer and delayed hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Complementarity determining region; CDR; CDRL1; antigen; cytostatic; anglogenesis inhibitor; vascular endothelial growth factor receptor; VEGF; tumour; leukaemia; antibody; cell proliferation inhibitor; antibody light chain variable domain.
